EDUCATION

BTech in Computer Science
Delhi Technological University

2024 - 2028 | Delhi, India

SKILLS

Python | Streamlit | Machine Learning | C++ | NLP | FastAPI / REST APIs | TRANSFORMERS |
SQL | Langchain | HTML | JAVASCRIPT | Web Scraping | AWS

EXPERIENCE

RevopsAgent

06/2025 - 09/2025

AI and Automation Intern

- Built an **AI Tools Database & Dashboard** for SaaS RevOps use cases by integrating **web scraping (Playwright, Selenium)** and **public APIs**, enabling automated tool discovery and scoring.
- Developed an **end-to-end hiring automation system** in **Google Workspace** using **Python, Apps Script, and OpenRouter**, adopted by multiple client companies.
- Automated RevOps workflows with **LLMs, APIs, and data pipelines**, improving scalability and operational efficiency.
- Deployed components on **cloud infrastructure (AWS Lambda + API Gateway)** for serverless execution, ensuring scalability.

National Youth Council Singapore

Apprenticeship

- Engaged in **training sessions** led by **industry experts** from startups like **Buzz AR** and **Mercurius**.
- Gained hands-on knowledge of **emerging technology** topics, including **cybersecurity** and **AI applications** for future advancements.

Intel Corporation

Apprenticeship

- Explored **data science** and **computer vision** concepts in a structured, **project-based learning** environment.
- Acquired **practical experience** in **AI problem scoping** and **real-world applications**.
- Developed **Structural Defect Detection Program**, a **CNN model** leveraging **transfer learning** to assess **cracks in architectural structures** and estimate their **life expectancy** on a scale of **1-100**.

PROJECTS

Agentic Arbitrage Engine on Stellar Blockchain (2nd Prize, 0xGenIgnite Hackathon)

- Built an on-chain arbitrage system using **Soroban smart contracts**, **Horizon API**, and an **agentic AI layer (LangChain + Mistral 7B)** to autonomously detect and execute profitable multi-hop trades across Stellar DEX pools.
- Developed a **real-time dashboard** (Next.js + Python) visualizing live spreads, pool imbalances, and arbitrage profitability – reducing DEX price fragmentation by 85% in simulation.

Product Review Sentiment Analyzer

- Fine-tuned a **BERT model** with **Hugging Face Transformers** for sentiment classification.
- Built a responsive Streamlit app for real-time sentiment prediction, handling large CSVs and structured data.

Structural Crack Detection (Intel AI Bootcamp)

- Built a **CNN model** with **VGG16** and deployed it via **Streamlit** for real-time crack detection.
- Implemented **transfer learning** and severity estimation on a **1-100 scale** for user-friendly insights.

AI-Powered Lead Enrichment Agent

- Built a web app that automates lead research using **Firecrawl** for content extraction and **Gemini 2.0 Flash** for AI-driven summarization.
